Nix Print Pro Mobile App

Key Features of Nix Print Pro Mobile

- **Single Spectral Measurement:** Users can get accurate digital color values within seconds, with outputs in RGB, LAB, CMYK, density and more.
- **Color Libraries:** The mobile app allows users to create an ad-hoc library, import a library from Nix Print Pro Desktop, CxF3 file or MIF file. It can also access colors from a Nix Print Pro Server on your private network, or over the internet.
- **Delta E Calculation:** One of the most important features for quality control, Delta E calculations let users know whether the color they've measured passes or fails when compared to a master sample.

How the Nix beats the accuracy of the human eye

Our devices block out all ambient light. You can take a measurement in bright sun or the pitch dark.

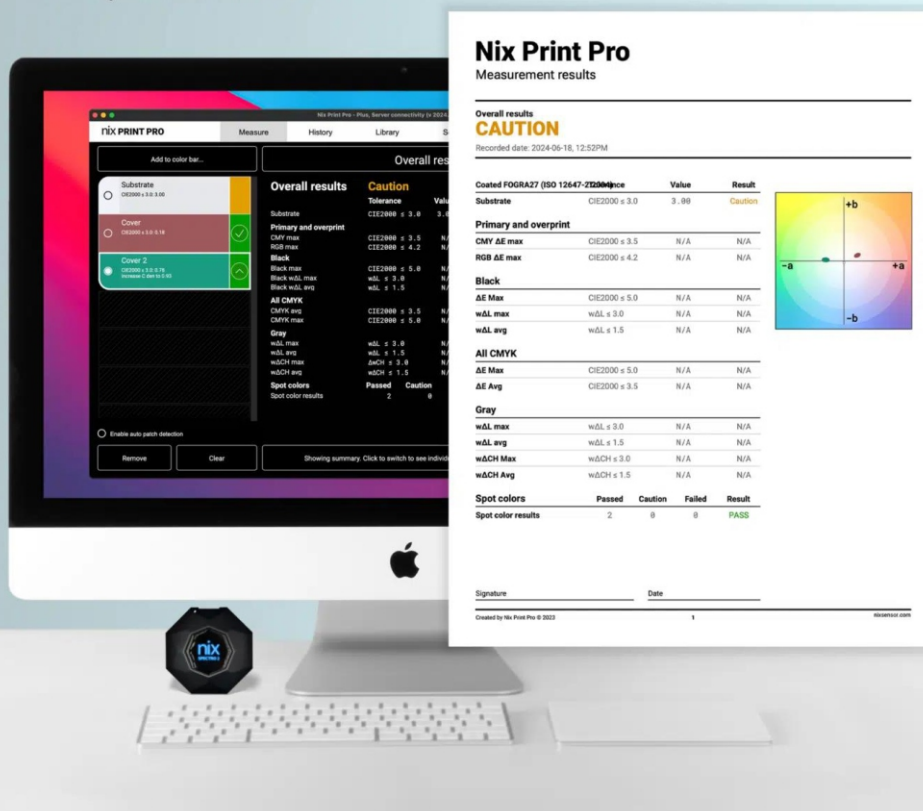

The Nix device provides its own, highly calibrated LED light source, making sure you get a consistent, accurate scan under any conditions.

The reflected light from the object being measured is then collected by the Nix's proprietary high-resolution sensor for processing and automatic error detection.

The results of the scan are instantly transmitted to your smart device via Bluetooth, where the colorimetric data is converted to physical paint brands, digital values like RGB, or your own tailored database set up for your specific workflow.

PDF Report Generation

Summary identifies whether a job has passed its tolerances and provides a breakdown of your ink Delta E values.

Staying Connected Without the Connection: Nix Print Pro Mobile's Offline Capabilities

The app functions without an internet connection, which is ideal for users working in areas with limited or no connectivity. However, users are required to connect to the internet at least once a week to verify that the software activation is current. If they do have access to the server add-on, custom libraries can be accessed across the desktop and mobile versions, further enhancing team collaboration.

Final Thoughts: Nix Print Pro Mobile as a Critical Tool for Team Collaboration

In an industry where color accuracy is paramount, having tools that extend quality control capabilities beyond the press operator is invaluable. **Nix Print Pro Mobile** provides non-production staff with an easy-to-use, portable solution for monitoring color accuracy throughout the print process. Now anyone in the supply chain can ensure that color standards are met.
